Vol. XXXIII

FOR THE VITAL PARTS

The consistency of "DIAMET Inspected" Electric Steels and their regularity in all processes of heat treatment and machining commends them to designers. For the vital parts of aero engines, they are now being specified by many important makers, and they also find application in automobile and general engineering practice.

The illustration shows the master connecting rod of the Armstrong-Siddeley "Tiger," from a forging by Thomas Smith's Stamping Works, Ltd., Ribble Road, Coventry.
